

URCHIN Cabinet

JAKE PHIPPS

WWW.JAKEPHIPPS.COM

This unique wall mounted cabinet was inspired by Jake's childhood collection of sea shells. The bilateral symmetry of an urchin shell provided a dynamic creative influence, as well as a technical one. The seventy polished brass panels on the doors are curved and faceted to create fragmented reflections of the users environment. These panels array around a central convex mirror that creates a similarly distorted yet crisper and cleaner view that entices the users eye inwards.

The cabinet's precision engineered opening and closing mechanism uses no electrical motors, but is in fact operated entirely and effortlessly by the user alone. By pushing a discreet key latch that pops the central mirror outwards, the user then simply pulls the central mirror downwards to a 90° angle revealing a polished marble work-surface on its reversed side, and a luxurious wooden interior.

The cabinet contains a central shelf with mirrored backed walls to bring light to the working area of the cabinet. Top and bottom sections each offer four further adjustable shelves made of toughened glass. Two discreet storage drawers sit within the doors and open on push catches.

NAME	URCHIN Cabinet
WEIGHT	175kg
DIMENSIONS	178 Ø cm x 44cm D / 70" Ø x 17.3"D
MATERIAL	Polished brass, high gloss Silky Oak, Verdi Alpi marble
AVAILABILITY	Bespoke materials and finishes available
LEAD TIME	16-20 weeks
